

Ellipse®

NEW FROM ELLIPSE Wrinkle Reduction Treatment

ELLIPSE, the Danish IPL company, has made another scientific breakthrough, with a better way to reduce wrinkles. Combining **ELLIPSE I²PL** technology with the new unique **Intense Photo Spray** photosensitiser, a safer and more effective wrinkle reduction is available. Wrinkles are visibly reduced in as little as one month, therefore making wrinkle reduction with **ELLIPSE** a faster way to reduce wrinkles.

Intense Photo Spray is sprayed onto the face before treatment. The spray's active ingredient provides rapid skin-deep penetration, ensuring optimal results. In addition to wrinkle reduction a course of treatments also benefits the skin's texture. Before introducing the new Wrinkle Reduction application, this procedure has been thoroughly tested by leading dermatologists and has acquired the CE mark of approval.
